

## Steps to Execute:

The code is written in python programming.so,we need python installed in our system. Set the path.

Step 1: open cmd and type **"python server\_a.py"** this command is used for server A To invoke after that minimize the cmd.

Step 2: open new cmd and type**"python server\_b.py"** this command is used for Server B after that minimize the cmd.

Step 3: open a new cmd again and type **"python client.py"** now execute this to get final output.

## KNOWN ISSUE:

The sorting is done only with the ASCII table.
